Features

• Quick-Adjust Buckle System

The skirt mounted quick adjust buckle system incorporates a newly-designed low-profile buckle into the crystal silicone skirt of the mask. The result is a compact, lightweight, technologically advanced mask design that can be easily and quickly adjusted for a perfect fit.

• 3-D strap

The M-28 employs a newly developed 3-D strap (patent pending) that snugly fits against the head's curvature for superior comfort and unprecedented fit.

• Corrective Lenses [R or L]

Accepts MC-7500, available in diopters from -1.5 through -8.0 in 0.5 increments.

• Round-edge skirt

The M-28 features a round mold (patent pending), special cross-sectionally shaped skirt fitting. The resulting soft fit suppresses pressure and reduces creasing left on the face. This "planar fit, instead of linear fit" silicone skirt maintains a great seal and unprecedented comfort.

• Lightweight composite frame

M-28QB

This design features a black silicone skirt and strap.
